

CORNELL HYPERLOOP

ABOUT US

Cornell Hyperloop is a student-run project team under the College of Engineering at Cornell University. Our team features students from diverse fields of study ranging from Mechanical Engineering to Applied Economics and Management. The team's main objective is to design and build a Hyperloop pod capable of extreme speeds to compete in SpaceX's annual competition. Read below for more about what we've been up to this month!

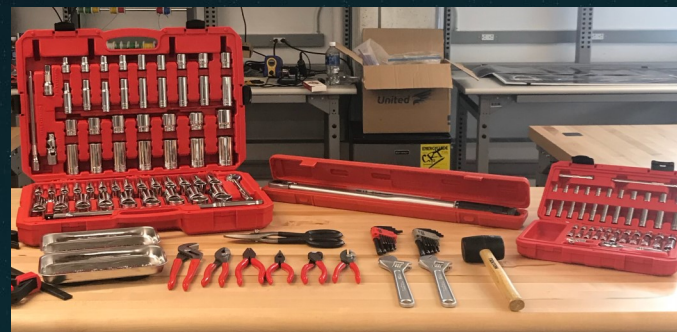

HIGHLIGHTS OF THE MONTH

The Mechanical Team has been working hard since the beginning of September to produce the first pod prototype. The team focused on upgrading all sub-systems implemented last year and developed over 10 new pod components.

The Business Team focused on helping the team move into the newly opened ELL Project Team Space provided by Cornell. With the new arrival of our build space, our business team has begun acquiring parts to begin testing for pod construction. Special thanks to **Tekton** for the tools!

THANK YOU TO OUR NEW SPONSORS!
